PROJECTS

NeuralSpark: AI-Powered E-Learning with Automated Grading

January 2026 - April 2026

- Built a production-ready AI-driven e-learning platform combining modern web technologies and LLM-based automated grading.
- Developed a custom AI evaluation pipeline using Transformers and prompt-engineered LLMs, achieving fast and consistent assignment assessment.
- Architected a scalable full-stack system with decoupled frontend and backend, improving maintainability and performance.
- Deployed and optimized the application on cloud platforms, ensuring high availability and real-time response.

AI-Powered Smart Task Management Dashboard

April 2026 - May 2026

HTML, CSS, JavaScript, Node.js, Express.js, MongoDB Atlas, JWT, Vercel, Render

- Developed a production-ready full-stack task management dashboard with secure JWT authentication and persistent session handling.
- Implemented RESTful APIs for task CRUD operations, analytics, and user management using Express.js and MongoDB Atlas.
- Designed responsive dashboard interfaces with calendar-based task tracking and productivity-focused UI/UX.
- Integrated refresh token workflow, CORS security, environment configuration, and API rate limiting for secure deployment.
- Deployed scalable cloud architecture using Vercel for frontend hosting and Render for backend services.
